

STEIGER History

John Steiger and his sons, Douglas and Maurice, were successful farmers near Red Lake Falls, Minnesota. They needed a larger tractor in their farming operation that was not available commercially. They built the first STEIGER tractor in their barn on the Steiger farm during the winter of 1957.

The first tractor weighed 15,000 pounds, was made mostly from salvaged parts, and was powered by a Detroit 6-71 Diesel Engine. It ran well enough to accumulate 10,000 hours of field time in just 10 years. This tractor is currently displayed in a West Fargo, North Dakota, museum.

The second tractor was much smaller and was powered by a 3-71N Detroit Diesel Engine. The first tractor commercially sold by Steiger, only six units were produced. One of these units is on display at the West Fargo museum.

In 1963, the Steigers became serious about building tractors and designed a series of units for sale. Douglas Steiger served as the chief designer while Maurice Steiger headed production. A marketing agent, Earl Christensen, was assigned in Elbow Lake, Minnesota. Earl later became one of the first STEIGER dealers.

A total of five agricultural tractor models were built in the barn and sold commercially. They were (in order of release):

Model	Engine	Engine HP	Transmission	Axles
2200	6V71N Detroit	238	Spicer 9-speed	Dana
1700	6V53N Detroit	216	Spicer 9-speed	Clark
1250	4-53N Detroit	130 est.	Funk 4-speed	Clark
3300	8V71N Detroit	328	Clark 8-speed	Clark
800 Tiger	V903 Cummins	300	Spicer 10-speed	Dana

These tractors all had different frame sizes, in tune with the Steiger design theory—to match the correct size frame to engine horsepower size. The 800 Tiger was the first to use a Cummins engine, a 903 V-8. A model 850 log skidder was also produced.

During the barn production time frame, approximately 125 tractors were built on the Steiger farm with the help of 20 employees. These tractors were distributed in both the U.S. and Canada.

Due to increased demand, Douglas and Maurice Steiger reached an agreement with private businessmen from North Dakota and Minnesota to move production to Fargo, N. D. in 1969. Steiger Tractor Incorporated was formed and located in Fargo, North Dakota, with 26 employees. One of the original buildings used is one block from the current plant location. Initially the 1700s were made in Fargo while the 2200s and 3300s were built on the farm.

The farm became the experimental test center and soon the first STEIGER Wildcat was produced. Other tractor names included Super Wildcat, Cougar, Bearcat, Cougar, and Turbo Tiger.

In 1970, a nation-wide network of 66 dealers was established.

Growth continued and production was moved to a second plant that currently houses the Case Engineering Test Center in Fargo.

In May 1974, ground was broken for the current production facility. The new 420,000 sq. ft. manufacturing plant was finished in less than a year and had the capacity to produce a new STEIGER tractor every 18 minutes. In the 1970's, more than 1,100 people worked at the STEIGER facility.

In 1976, the Series III tractors were introduced and an Australian subsidiary was established with 50 selling dealers.

During this time frame, STEIGER also produced more than 10,000 tractors for Allis-Chalmers, Ford, CCIL's Canadian CO-OP Implement Limited and International Harvester.

In 1977, annual sales hit \$104 million and in 1979 the plant built its 10,000th tractor.

In 1982, the Panther 1000 Series was introduced. It was the first model to have a 12-speed full powershift transmission, electronic controls, a comfortable deluxe cab and PFC hydraulics.

In 1983, the Tiger "KP" Series IV model was introduced at 525 horsepower and a 6 x 4 Allison powershift transmission.

In January 1986, another revolutionary tractor, the PUMA 1000, was introduced. It was the first STEIGER tractor built with a steerable front axle and articulated steering, making maneuvering in row crop applications with a larger tractor possible. In the same year, a 12-speed powershift transmission was introduced on all STEIGER tractors.

The poor farm economy of the 80's also took its toll on the STEIGER Tractor Co. With the worldwide farm economy struggling, STEIGER sold fewer tractors. In 1986, with the plant operating at 25% capacity, STEIGER filed for Chapter 11 bankruptcy protection. Later that year, Tenneco Inc., then the parent company of Case, bought the company.

With the purchase of STEIGER, Case continued producing the green STEIGER tractors and simultaneously introduced the first red 9100 Series Case IH STEIGER tractors. Production of green STEIGER tractors continued until June 1989.

In 1990, the 9200 Series was introduced with increased horsepower and other improvements to enhance performance and reliability.

In 1995, the 9300 Series was unveiled in Fargo, N.D. The 9300 Series "Powerful Heritage" tractors once again carried the respected STEIGER name.

In 1996, Case IH introduced the STEIGER QUADTRAC at 360 HP. In 1998, a 400-HP model was released. The unique QUADTRAC featured four separate tracks (one on each corner) which worked independently to provide a level of ground contact that cannot be matched by four-wheel drive or two-track systems. The new design reduced ground compaction and provided more traction and less slippage. In addition to being an outstanding farming vehicle, it also proved itself to be one of the best performing tractors ever produced to work in the tough scraper land-leveling market.

On November 20, 1997, the 40,000th STEIGER tractor was produced (this number only reflects STEIGER branded tractors and no others produced at the Fargo plant), marking a very important milestone in the exceptional history of STEIGER. Including tractors made for other manufacturers, more than 50,000 tractors have been produced by Steiger.

This brings us to the newest generation of STEIGER tractors, the STX Series. This new line of tractors is a totally new design with 13 versions of four models. They are:

- ◆ STX 275 – AccuSteer and standard wheel tractors
- ◆ STX 325 – AccuSteer and standard wheel tractors
- ◆ STX 375 – QUADTRAC, standard and heavy duty wheel tractors, scraper wheel and QUADTRAC
- ◆ STX 440 – QUADTRAC and standard wheel tractors, scraper wheel and QUADTRAC

The latest generation includes such innovations as 16-speed full powershift transmission, up to 55 gpm hydraulic flow, electronic remotes, luxury cabs, Case IH designed and built axles, CAN data bus bar electronics, and state-of-the-art, full authority electronic engines.

STEIGER 4 WD Tractor Model Identification Guide 1969-1998

Introduction

The STEIGER® Tractor Model Identification Guide is intended to be used as a quick reference source to aid the Case IH dealer parts, sales, and service personnel to identify a customer's specific STEIGER 4WD tractor by model/year and/or major components (and when possible other key differences or variations) unique to these tractor models.

This manual also contains important information regarding tractor specifications, beginning serial number by model/year and part numbers for belts and filters for older STEIGER tractors built before 1986.

This manual is divided into major sections by tractor series. Early STEIGER tractors (1969-1986) are identified as Series I, Series II, Series III, Industrial Series, Series IV and the 1000 Series. Within the series a designated feline family name was used to differentiate the chassis size and horsepower range. For example; Series I Wildcat (small chassis), Series I Cougar (intermediate chassis), and Series I Tiger (large chassis). Starting with Series II production, in addition to the series designation and feline family name, an alpha-numerical model designation was added to identify the many Series II and III tractor model categories.

The Series III model designations are fully explained throughout this section of the manual.

Beginning in late 1986, the first 9100 Case IH Series tractors went into production. These tractors were designated as the 9110, 9130, 9150, 9170, 9180 and 9190 4 WD models according to chassis size and horsepower range. These were the first STEIGER 4 WD tractors to be painted "red" with the Case IH brand name.

Examples of the model/serial number plate and P.I.N. codes and usage are also shown for each applicable early production model tractor. Dealer personnel should become familiar with the P.I.N. (Product Identification Number) and usage codes. It is important to remember that the P.I.N. plates shown on the pages in this manual are examples only. Always use the actual P.I.N. shown on the tractor along with the code information provided for each model example shown for tractor models built before 1987.

Product Identification Numbers (P.I.N.) listed in this publication represent the first tractor model build and/or manufacturing plant new year product update and may not necessarily represent a particular calendar or tractor model year.

For each Series and/or Model tractor listed in this manual a Parts Catalog part number is listed to aid in determining which Parts Catalog to reference for a specific series or model 4WD tractor.

IMPORTANT: *Because many tractors may have been field upgraded in some manner from original production, the dealer should always refer to the correct Parts Catalog listed and Field Service Bulletins if there is any question on service parts usage.*

Information contained in this publication pertains to **Standard Production** tractors only. No attempt is made to identify tractors built to special order sales requests.

***Swinging Type single speed, below S/N 107-00332 stationary mounted with integral oil reservoir, S/N 2001 & up*

COMMENTS: The K598 20/30 (5 x 5) double reduction outboard planetary axle was first introduced in 1978 beginning with S/N 107-00107. The 598 00 (rear) or 598 10 (front) axle used 3 planet pinion gears around the in-board planetary sun gear and 5 planet pinion around the outboard planetary sun gear. The 598 20 (rear) or 598 (30) front axle featured 5 planet pinion gears around the in-board planetary sun gear and 5 planet gears around the outboard planetary sun gear. Hence the term 3 x 5 or 5 x 5 double

reduction outboard planetary system. You should be aware that many 598 00/10 (3 x 5) axles have been field upgraded to the 598 20/30 (5 x 5).

CLUTCH: Spicer HD 15.5 inch dual plate, hydraulically actuated

HYDRAULIC SYSTEM: Open center, load sensing, full priority to steering, 4-remote valves (std) and flow control

***TRANSFER CASE:** Stationary mounted 2-speed; 88:1 high range ration, helical gearing, tapered roller bearings, pressure lubricated and oil cooled with oil from integral reservoir.

TRANSMISSION: Spicer SST 1010 mechanical 10-speed, provides 20 speeds forward, 4 reverse when coupled with 2-speed transfer case.

PARTS CATALOG P/N: 37-078R2 (10-81)

**Integral oil reservoir for both transfer case and transmission.*

COMMENTS: The "PT" Series were the first tractors produced with a longer and narrower frame to accomodate the optional hydrostatically powered and electronically controlled PTO system rated at 105 PTO hp @ 1000 rpm or 57 PTO hp @ 540 rpm output.

Industrial Series CA or CU Model Tractors

Industrial Tractors Model CA or CU 280 (1982 - 1984)

MK98F008

MODEL CA or CU 280

ENGINE: Cat 3406 DIT in-line 6 cyl (CA 280) Cummins NT-855-C280 in-line 6 cyl (CU 280):

AXLE: STEIGER S-40 single reduction outboard planetary w/optional controlled traction differential front & rear. 25.59:1 overall ratio

BRAKES: Air actuated power screw disc brake, spring applied park brake

HYDRAULIC SYSTEM: Closed center, load sensing and pressure compensating, 4-spool electro-hydraulic actuated remote valves

TRANSFER CASE: 2-speed, deep reduction 2.303:1 low range ratio. Constant mesh helical gearing with sliding clutch. Pressure lubricated and oil cooled.

TRANSMISSION: Allison HT 754 CRD 5-speed automatic with converter lockup in all gears, second speed start-up. Provides 10 speeds forward, 2 reverse with 2-speed transfer case.

PARTS CATALOG P/N: 37-101R2(7-84)

SERIES IV CM-KM-SM

Series IV Panther

Model CM or KM 360

Series IV CM, KM & SM Tractors

Engine:

Cat 3406 DIT in-line 6 cyl (CM 360)

Cummins NT-855-A360 in-line 6 cyl (KM 360)

Axle: Steiger/Raba K598 20/30 or 598 60/70 double reduction outboard planetary

Clutch: Spicer HD 15-1/2 in. dual plate, hydraulically actuated

Hydraulic System: Open center, load sensing, full priority to steering, 3 or 4 remote valves and flow control

Transfer Case: 2-speed, constant mesh helical gearing, tapered roller bearings, pressure lubricated and oil cooled.

Transmission: Spicer SST 1010 constant mesh, spur gear mechanical 10 speed, pressure lubricated and oil cooled. Provides 20 speeds forward, 4 reverse with 2-speed transfer case.

Parts Catalog P/N: 37-122R3(10-84)

Model No: 115 (CM 360), 116 (KM 360)

COMMENTS: Later production tractors will have K598 60/70 axles.

Product Identification Plate:

In addition to listing the tractor model and serial number, the "P.I.N." plate will aid in determining not only the month and year of manufacture, but other components that make up the product.

Example:

Clutch: Spicer HD 15-1/2 in. dual plate, hydraulically actuated

Hydraulic System: Open center, load sensing, full priority to steering, 3 or 4 remote valves and flow control

Transfer Case: 2-speed, constant mesh helical gearing, tapered roller bearings, pressure lubricated and oil cooled.

Transmission: Spicer SST 1010 constant mesh, spur gear mechanical 10 speed, pressure lubricated and oil cooled. Provides 20 speeds forward, 4 reverse with 2-speed transfer case.

SERIES IV CS-KS

Series IV Cougar

Model CS or KS 280

Engine:

Cat 3406 DIT in-line 6 cyl (CS 280)
 Cummins NT-855-A280 in-line 6 cyl (KS 280)

Axle: Steiger S-40 single reduction outboard planetary or Steiger/Raba K598 20/30 or K598 60/70 double reduction outboard planetary.

Hydraulic System: Open center, load sensing, full priority to steering, 3 or 4 remote valves and flow control

Transfer Case: 2-speed, deep reduction 2.303:1 low range ratio, constant mesh helical gearing, tapered roller bearings, pressure lubricated and oil cooled with integral oil reservoir.

Transmission: Allison HT 754CRD 5-speed automatic with convertor lockup in all gears (10 speeds forward, 2 reverse w/2-speed transfer case).

Parts Catalog P/N: 37-125(12-83)

Model No: 155 (CS 280), 154 (KS 280)

Product Identification Plate:

In addition to listing the tractor model and serial number, the "P.I.N." plate will aid in determining not only the month and year of manufacture, but other components that make up the product.

SERIES IV KP

Series IV Tiger

Model KP 525

Series IV KP 525 Tractors

Engine: Cummins KTA 1150-A525 in-line 6 cyl

Axle: Steiger/Raba K594 20/30 double reduction outboard planetary. 31.702:1 overall ratio

Hydraulic System: Open center, load sensing, full priority to steering, 4 or 5 remote valves and flow control

Transfer Case: 4-speed, constant mesh helical gearing, sliding collar shifting and tapered roller bearings, pressure lubricated and oil cooled.

Transmission: Allison CLT 5961 6-speed electric powershift with torque convertor and automatic convertor lockup feature. Will provide 24 speeds forward and 4 reverse w/4-speed transfer case.

Parts Catalog P/N: 37-128(3-84)

Model No: 131 (KP 525)

Product Identification Plate:

In addition to listing the tractor model and serial number, the "P.I.N." plate will aid in determining not only the month and year of manufacture, but other components that make up the product.

COUGAR 1000 SERIES

Cougar 1000 Series

Model CR or KR 1225

Engine:

Cat 3306B DIT in-line 6 cyl (CR 1225)
Cummins LT-10-A in-line 6 cyl (KR 1225)

Axle: Adjustable bar, single reduction inboard planetary (front differential lock optional). 27.66: 1 overall ratio, or Steiger/Raba K598 60/70 double reduction outboard planetary (front no-spin optional). 25.474:1 overall ratio.

Brakes: Hydraulic, self-adjusting single caliper, disc brake.

Clutch: Engine flywheel mounted 2-plate torque limiting type

Hydraulic System: Closed-center, load sensing, pressure compensating, full priority to steering. 3 or 4 spool remote valves with individual section float positions and flow control; 2 to 30 gpm.

Transmission: Range powershift, 20 speeds forward, 4 reverse. 2-Speed powershift hydraulically operated and electronically controlled. 2-speed transfer case integral with main 5-speed transmission. Independent pressure oil lubrication and cooling.

PTO System (optional): Live and independent system. Lever actuated, hydraulically operated wet clutch with integral hydraulically applied brake when control is shutoff. Shaft speed 1000 rpm @ 2100 engine rpm.

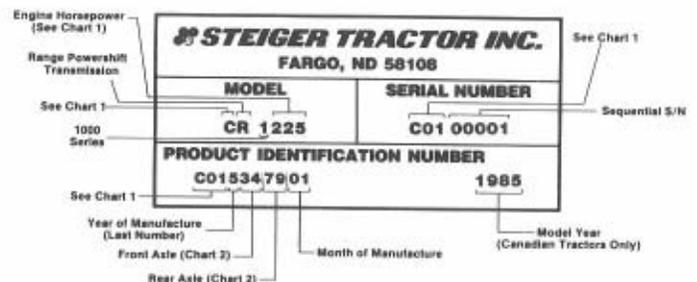

Parts Catalog P/N: 37-141(2-85)

COMMENTS: The Cougar 1000 Series first introduced in January, 1985.

Product Identification Plate:

In addition to listing the tractor model and serial number, the "P.I.N." plate will aid in determining not only the month and year of manufacture, but other components that make up the product.
